                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

The method can be used for screening, cc diagnosis and prognosis of RA in a subject or for monitoring the effect comprises; (a) analysing a sample of serum or plasma and optionally cc synovial fluid by two-dimensional electrophoresis, to generate a two-cc dimensional array of features; (b) identifying at least one chosen cfeature whose relative abundance correlates with the presence or absence of RA; and (c) comparing the abundance of each chosen feature or plasma from cone or more persons without RA, where the relative abundance of the chosen feature or features in the subject. The method can also be used in clinical consence of RA in the subject. The method can also be used in clinical consence of RA in the subject. The method can also be used in clinical consence of RA in the subject. The method can also be used to identify compounds that promote or inhibit their activity, which are then used as CRA drugs. Nucleic acid encoding RADFs can be used in gene therapy consecuted in septement of RA-forescent expression reference protein isoform peptides and consecution of the expression reference protein isoform peptides and consecution of the exemplification of the present invention.
                                                                       New schlzophrenia associated protein isoforms and encoding nucleic acid
molecules, useful for treatment, diagnosts and prognosis of
schlxophrenia and screening for potential drugs for treatment and new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Schlzophrenia-associated protein isoform; SPI; SPI-206; SPI-238; SPI-240; neuroleptic; gene therapy; cerebrospinal fluid; serum; plasma.

Associated Protein Isoforms (SPIs) in samples, e.g. by electrophoresis, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, studying the effectiveness of treatments and for identifying potential therapeutic agents. The method is used for (1) screening or diagnosis of SCH and the relative abundance of at least I chosen feature correlates with the presence or absence of SCH; and (2) monitoring the effect of therapy administered to a subject with SCH and the relative abundance of at least I chosen feature which correlates with the severity of SCH. The expression and activity of the SFs, SPIs and related molecules (e.g. secondary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebrosphal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a serie of the prognosis of the series 
                                                                                                                                                                                                                                                                                                                                     The invention relates to methods and compositions for screening, diagnosts and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) Associated Features (SFs) and SCH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   targets to identify and produce potential therapeutic agents for the treatment of SCH. The paucity of detectable neuralgic defects distinguishes neuropsychiatric disorders such as SCH from neurological disorders, where manifestations of anatomical and biochemical changes have been identified in many cases. Consequently the identification and characterisation of cellular and/or molecular causative defects and neuropathies are necessary for improved treatment of neuropsychiatric disorders. AAU15114-AAU15762 represent the amino acid sequences of disorders. AAU15114-AAU15762 represent the amino acid sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               schizophrenia-associated isoforms used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             eosinophilia; allergy; asthma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                              The present invention describes chimeric antibody (Ab) heavy (H) chains accontaining the variable region of the H chain of a mouse monoclonal Ab crecognising human tissue factor (hTF) and the constant region of the H chain of a mouse monoclonal Ab crecognising human Ab. The variable region is one of six specified ab sequences (which are the H chain variable regions from mouse monoclonal cab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L) chains containing the variable region of the L chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant conclonal Ab recognising human tissue factor (hTF) and the constant conclonal Ab recognising human tissue factor (hTF) and the constant conclonal Ab's ATR-2,3,4,5,7 or 8). The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of the treatment and prevention of thrombotic disease, especially of the second immunogenicity and store monoclonal antibody but a constant constant of the present constant of the present constant of the present sequences used in the exemplification of the present constant of the present constant of the present sequences used in the exemplification of the present constant constant on the exemplification of the present constant on the present constant of the pres

                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                        The present invention describes a method for treating cancers that express the A33 antigen. The method comprises administering an anticancer agent (I) conjugated to an immunoglobulin product (II) that binds specifically to A33 and contains one or more of 13 specified complementarity determining regions (CDRs), given in AAB98562 to AAB9874. (I) has cytostatic activity. The method can be used for treating colon and stomach cancers. (II), or the nucleic acid encoding it, can be used directly, in unconjugated form, for immunotherapy of cancer, and, when labeled, for detection or diagnosis of diseases associated with A33 expression. AAH22218 to AAH22254 and AAB98230 to AAB98321 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for treating cancers that express the A3 antigen. The method comprises administering an anticancer agent (I) conjugated to an immunoglobulin product (II) that binds specifically to A33 and contains one or more of 13 specified complementarity determining regions (CDRs), given in AA998262 to AA998274. (I) has cytostatic activity. The method can be used for treating colon and stomach cancers. (II), or the nucleic acid encoding it, can be used directly, in unconjugated form, for immunotherapy of cancer, and, when labeled, for detection or diagnosis of diseases associated with A33 expression. The method comprises expressing a library of antibodies comprising one or more complementarity determining region (CDR) from the variable domain sequences that specifically immunoreact with the antigen grafted into framework regions from humans, and selecting the antibodies that react with the antigen. The method is useful for humanising non-human mammallan antibodies, which can be used for the treatment of a variety of diseases. The present sequence represents an A33 antigen binding immunoglobulin product VLFR3 peptide which is given in an example from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  libraries of antibody domains and fine tuning variable domain regions
                       AAW62793-822 represent fragments of human antibodies produced by transgenic Xenomice, created using the method of the invention. The specification describes a transgenic non-human mammal which has genome modifications that comprise an inactivated endogenous immunoglobulin (Ig) locus, so that the mammal does not display normal B-cell development. The
                                                                                                                                                                                                                                                                                                                                                                                                         Green L,
Mendez M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-DEC-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-DEC-1997;

The variable kappa light region 012 encoded amino acid was used in the production of anti-epidermal growth factor receptor (EGF-r)-antibodies. The antibodies can be administered therapeutically to patients (human or veterinary) to treat solid tumours. EGF-r is overexpressed on many human solid tumour types, and the fully human antibodies (i.e. comprising and inhibit both epidermal growth factor (EGF) and transforming growth factor alpha (TGF-alpha) binding to EGF-r (known to lead to cellular proliferation and tumour growth). They can prevent tumour cell growth and, in combination with an antibodies antibodies can minimise the immunogenic and allergic responses intrinsic to previous mouse/rat or mouse/rat-qerived antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                          Humanised antibodies against epidermal growth factor receptor, EGF-r useful to treat solid tumours whilst inducing reduced immunogenic or allergic effects compared to mouse or mouse-derived antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   germline configuration, the human heavy chain Ig locus comprising a human micro constant region and regulatory and switch sequences, human J-H genes, human D-H genes, and human V-H genes and an inserted human kappa light chain Ig locus in germline configuration, the human kappa 11ght chain Ig locus in germline configuration, the human kappa genes, where the number of V-H and V-kappa genes inserted are selected to restore normal B-cell development in the mammal. The transgenic animals have a near complete human Ig locus, including both a human heavy chain locus and a human kappa 11ght chain locus. They can be used for the production of human antibodies when exposed to particular antigens e.g. when exposed to human IL-8, EGFR or TNF- alpha resence fively.
                                                                                                                                                                                                                                                                                                                                                                               Example 3; Page 105; 143pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                 modified genome also has an inserted human heavy chain Ig locus in germilate configuration, the human heavy chain Ig locus comprising a human micro constant region and regulatory and switch sequences, human J-H genes, and human v-H genes and an inserted human kappa light chain Ig locus comprising a human kappa constant region, J-kappa genes, and v-kappa genes, where the number of v-H and v-kappa genes inserted are selected to restore normal B-cell development in the mammal. The transgenic animals have a near complete human Ig locus, including both a human heavy chain locus and a human kappa light chain locus. They can be used for the production of human antibodies when exposed to particular antigens e.g. when exposed to human II-B, EGFR or TNF- alpha contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Green L,
                                                                                                                                                                                                                   AAW62793-822 represent fragments of human antibodies produced by transgenic Xenomice, created using the method of the invention. The specification describes a transgenic non-human mammal which has genome modifications that comprise an inactivated endogenous immunoglobulin (Ig) locus, so that the mammal does not display normal B-cell development. The

                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW14490-91 are the heavy and light chains (respectively) of monoclonal antibody (MAb) D. MAb D recognises Vibrio cholera neuraminidase-resistant epitope of ganglioside GD2, from a human melanoma cell line. MAbs A, B and C (see AAW14484-89) are mentioned in the specification, but are not part of the claims. MAbs A and B recognise antigens and Il resp., of a permenant human tumour cell line. MAb C antigens an epitope of a tumour-associated antigen. These antigens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW14491;

The CC transgenic Xenomice, created using the method of the invention. The CC specification describes a transgenic non-human mammal which has genome CC modifications that comprise an inactivated endogenous immunoglobulin (Ig) CC locus, so that the mammal does not display normal B-cell development. The CC modified genome also has an inserted human heavy chain Ig locus in CC germline configuration, the human heavy chain Ig locus comprising a human CC micro constant region and regulatory and switch sequences, human J-H CC genes, human D-H genes, and human V-H genes and an inserted human kappa light CC chain Ig locus in germline configuration, the human kappa light CC chain Ig locus comprising a human kappa constant region, J-kappa genes, and V-kappa genes inserted CC cand V-kappa genes, where the number of V-H and V-kappa genes inserted CC and V-kappa genes, where the number of V-H and V-kappa genes inserted CC transgenic animals have a near complete human Ig locus, including both a CC human heavy chain locus and a human kappa light chain locus. They can CC human heavy chain locus and a human kappa light chain locus. They can CC particular antigens e.g. when exposed to human II-8, EGFR or TNF- alpha CC crespectively.
                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein search, using sw

globulin IV alpha subunit delta-1 chain, seed - cucurbit (fragments)
N;Alternate names: 118 globulin alpha subunit delta-1 chain
C;Species: Cucurbita sp. (cucurbit)
C;Date: 21-Nov-1993 #sequence_revision 08-Nov-1996 #text_change 08-Nov-1996
C;Accession: S09066
R;Ohmiya, M.; Hara, I.; Matsubara, H.
Plant Cell physiol. 21, 157-167, 1980
A;Title: Pumpkin (Cucurbita sp.) seed globulin IV. Terminal sequences of the acidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A:Accession, PT0650
A:Status: translation not shown
A:Molecule type: mRNA
A:Residues: 1-6 <FEE>
A:Experimental source: day 4 postnatal thymus, strain

  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
